

Roll-Away Window Screens™

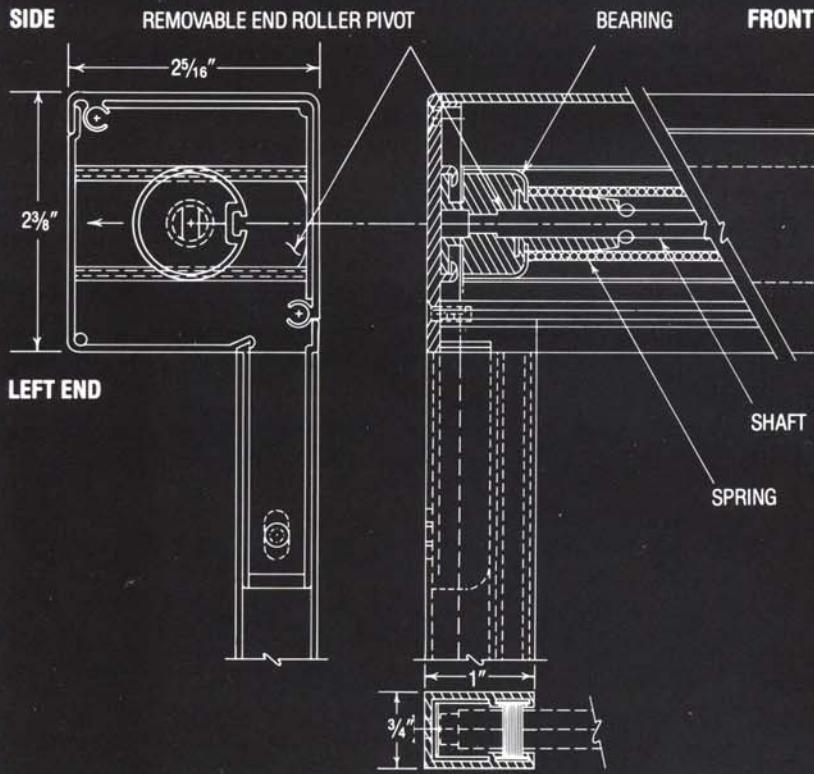

Roll-Away, the disappearing interior window screen. In its concealed position, an unobstructed view and 20% more light. In its closed position, insect-free ventilation. A custom screen with unlimited applications for the discerning buyer looking for a quality alternative.

Designed to roll up like a window shade when not in use, the Roll-Away interior window screen offers an unobstructed view, yet allows ventilation when desired. Whether you're the owner of an English manor with a view of the mountains, a houseboat moored in a quiet harbor, or simply a person who takes pride in the quality of your home and windows, the Roll-Away was planned with you in mind. Designed to satisfy both standard and custom opening requirements, the application possibilities are unlimited. Consider these Roll-Away ideas:

- View windows requiring occasional ventilation
- Unique windows such as those with quality wooden frames, divided lites, beveled or stained glass
- Custom window designs not accommodating standard screens
- Sailboats, yachts and houseboats requiring insect protection
- Commercial building aeration
- Mobile homes, recreational vehicles and vans

In addition to the wide range of applications, advantages include a choice of two frame finish colors, special screen options and a life expectancy of 25-30 years because the Roll-Away is not constantly exposed to the elements. Furthermore, rescreening is simple and can be accomplished without removing the Roll-Away from the window frame.

ROLL-AWAY: A QUALITY ALTERNATIVE TO THE COMMON WINDOW SCREEN.

SUGGESTED APPLICATIONS

- Casement windows
- Projected/awning windows
- Double hung windows
- Jalousie windows
- French Doors
- Dutch Doors
- Screened porches
- Skylights

SPECIFICATIONS

ROLL-AWAY screens of the types and sizes in the plans and/or called for in this specification shall be manufactured by ROLL-AWAY, a division of R. Lang Company or equal, the basic design to be an aluminum roller housing with insect screen attached to a roller mechanism. Roller housing and guides shall be constructed of 6063-T5 aluminum alloy, and shall be white or bronze thermal setting polyester coated. Insect screen cloth shall be 18 x 14 mesh 0.009 bronze wire. Screens shall be equipped with dual locking devices built into drawbar connecting automatically with a series of stops in each guide. All necessary installation hardware, fastener and miscellaneous equipment as herein specified shall be furnished with the screens.
